KRISHICONNECT

Farmer Field Visit & Survey Report

Field Survey Progress: 28 / 80 Farmers

Target	Completed	Remaining	Progress
80	**28**	**52**	**35%**

1. Objective of the Field Visit

The field visit was conducted as part of the KrishiConnect project to understand farmers' agricultural information needs, digital literacy, smartphone usage, language preferences, and expectations from a simple and farmer-friendly digital platform.

2. Survey Methodology

A structured questionnaire was used during direct interactions with farmers. The survey covered basic farmer profile information, smartphone and digital skills, preferred language and interaction mode, agricultural information requirements, and expected features of an integrated agricultural application. A total of 28 responses were collected during this week against a planned target of 80.

3. Field Visit Photographs

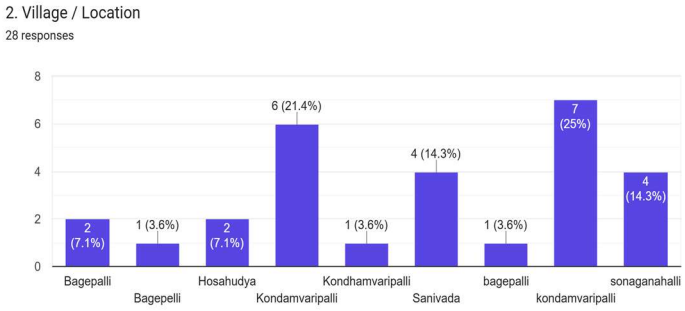

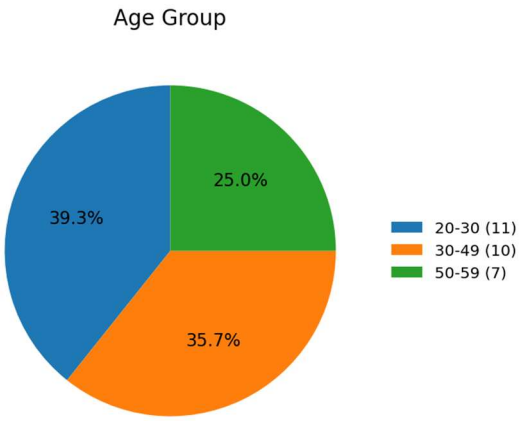

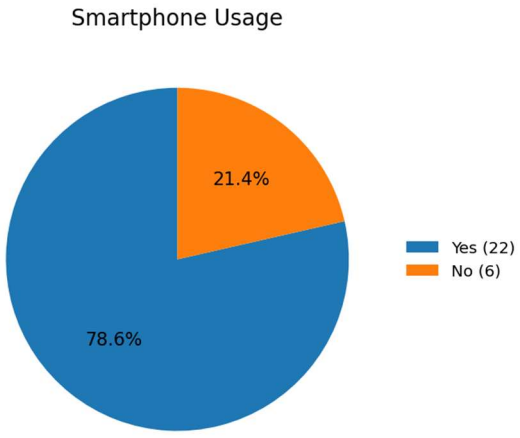

4. Survey Data Visualization

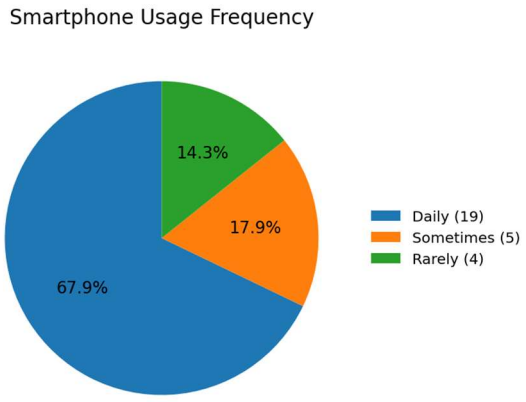

The following charts summarize the 28 farmer responses collected during the field visit. The visualizations are organized around farmer profile, digital literacy, language and interaction preferences, and requirements relevant to KrishiConnect.

4.1 Farmer Profile & Smartphone Usage

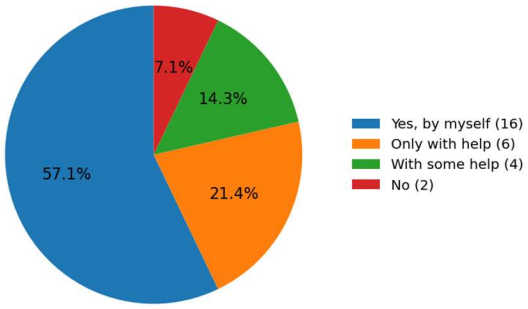

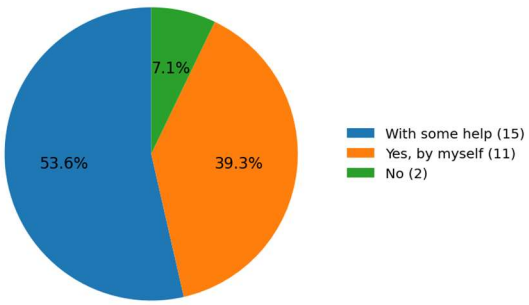

4.2 Digital Literacy & Language Preference

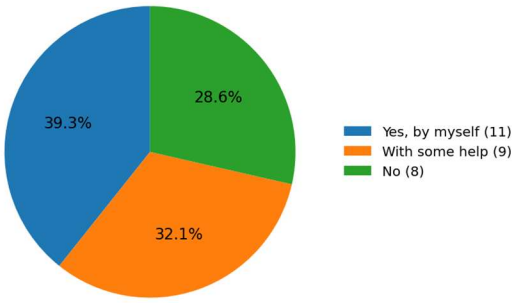

Ability to Enter OTP

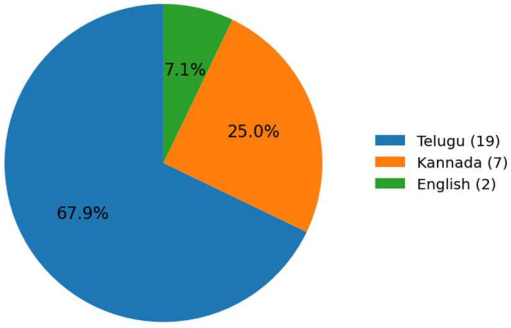

Ability to Create and Use a Password

Ability to Install a New Mobile Application

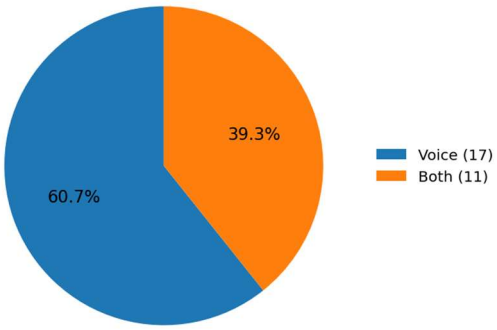

Preferred Language for Agricultural Application

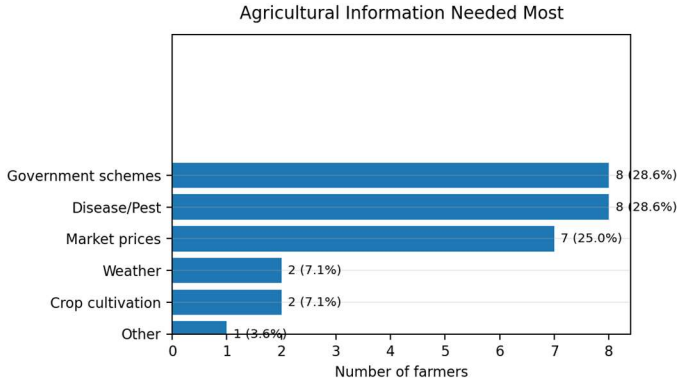

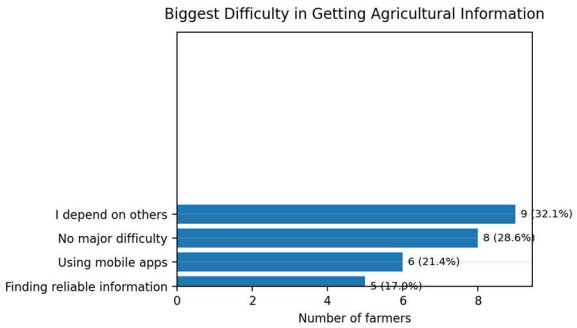

4.3 Information Needs & AI Assistance

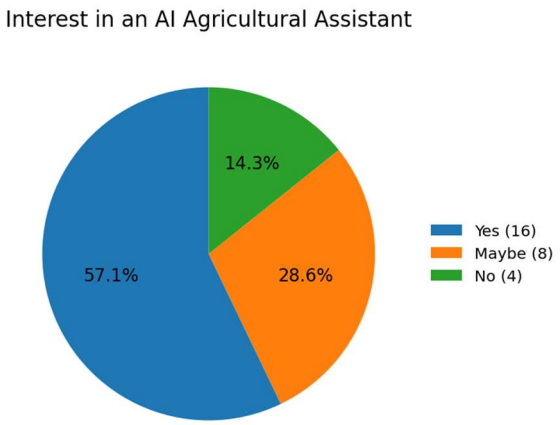

Preferred Way to Ask Agricultural Questions

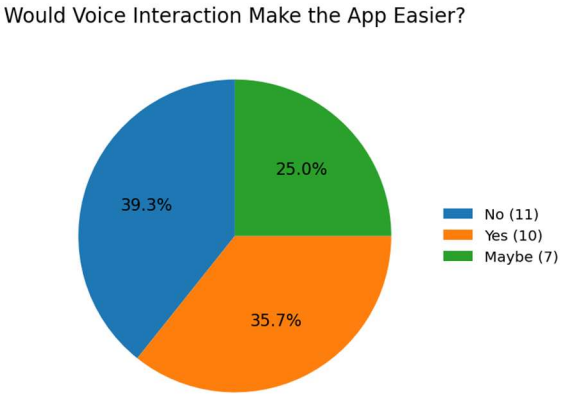

Agricultural Information Needed Most

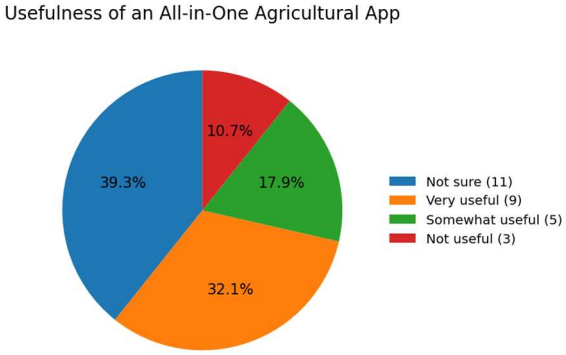

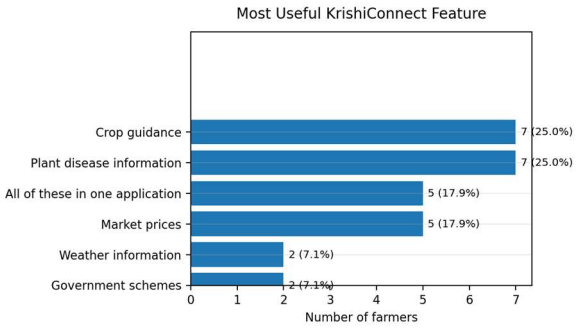

4.4 Interaction Preference, Usefulness & Progress

5. Key Findings

- 22 of 28 farmers (78.6%) reported using a smartphone.
- 19 farmers (67.9%) reported using their smartphone daily.
- 16 farmers (57.1%) can enter an OTP independently, while others need some or complete assistance.
- Only 11 farmers (39.3%) can install and use a new mobile application independently.
- 19 farmers (67.9%) preferred Telugu, making regional-language support important.
- 17 farmers (60.7%) preferred voice for asking agricultural questions, while the rest preferred both voice and text.
- Disease/pest information and government schemes were the most requested information categories, with 8 responses each.
- 16 farmers (57.1%) said they would use an AI assistant that answers agricultural questions in their preferred language.

6. Implications for KrishiConnect

Field Observation	KrishiConnect Requirement
Some farmers need help with OTPs, passwords and apps.	Keep onboarding simple and minimize complicated login steps.
Telugu was the preferred language for most respondents.	Provide regional-language support and clear local-language content.
Voice was the preferred way to ask questions for many farmers.	Include voice input and conversational assistance.
Disease/pest information was a top requirement.	Provide crop disease identification/advisory content.
Government schemes and market prices were frequently requested.	Provide scheme information and market-price insights.
Many farmers depend on others for information.	Design the platform for easy, guided self-service.

7. Next Steps

The current survey has completed 28 out of the planned 80 farmer responses. The remaining 52 responses will be collected through additional field visits to obtain broader and more representative feedback. The completed dataset will then be analyzed to validate the initial findings and refine the KrishiConnect platform requirements.
